Inspection and Rework

At WFQ Inc we understand the headaches, effectiveness and most importantly the cost levied on our customers when non-conforming parts reach a customer. Therefore, WFQ Inc. provides a highly trained staff of individuals with extensive Quality Control experience to prevent the shipment of suspect and non-conforming product to secondary customers on every level of the supply chain. WFQ Inc. is your last line of defense in maintaining quality production.

WFQ Inc. strives to provide our customers with multiple solutions and cost saving measures to limit the impact of containment. Our team is skilled in determining whether rework is possible. This provides our customers with the opportunity to rework non-conforming parts to reduce or eliminate the cost generated by scrap, ensuring that the rework conducted meets TS Global Specification through secondary inspections.

WFQ Inc. also specializes in, and emphasizes the collection and submission of extensive data through our proprietary web based data collection software which is integral in root cause analysis for problem solving, quality, machining and programming issues in an effort to establish a clean point and end containment as expediently as possible.

Resident Liaisons and Quality Engineers

Our Liaison team is comprised of highly qualified personnel that are proficient in problem solving, have established relationships with the key decision makers in the plants and excellent communication skills. Their reporting is done via our proprietary web-based system that is extremely user friendly and an essential tool to our customer base. We support short- and long-term assignments plus offer as needed services anywhere in the US, Canada and Mexico.

Our Quality engineers are continually training to the latest industry standards with some being Six Sigma Certified. They are proficient in SPC, APQP, PPAP, Process Flow FMEA, Control Plans, Gage R&R, Capability analysis.

Launch Support

Our launch team is comprised of diligent individuals that are trained to be objective and protect the products integrity. The launch data is reported through our proprietary web-based system that generates downloadable graphs and charts that ultimately saves our customers the internal resources normally required for this process.
